

# Visualization of a mobile eBenefits app.

1  
eBenefits branded  
for mobile devices...

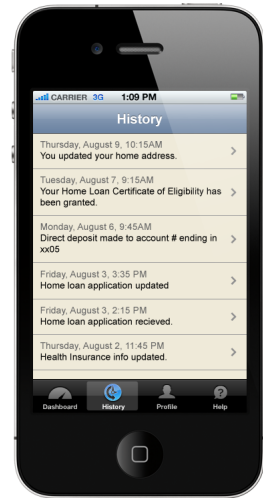

2  
... reaches the vets  
wherever they are,

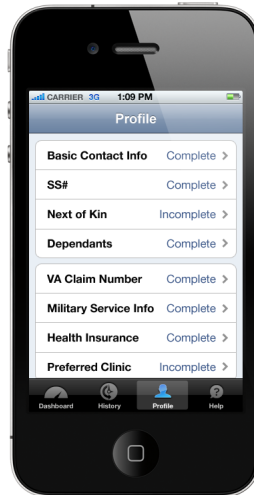

3  
The app has four tabs. The first and most important is the Dashboard screen, where they receive important updates, and prompts that expedite them through the various benefits processes.

4  
The second is the History screen, where they can follow the paper trail back through a process should the need arise.

5  
Next is the profile screen, a central location for all relevant contextual information about the vet. Enter info once and update as needed. All benefits processes have the vet's info pre-loaded.

6  
Finally, the Help screen. Need to locate a service? Don't know which documents are needed? Who should the vet call? This is the PANIC button.
